Which ELD Providers Are Supported?

FAQs · https://atsfleetmanagement.com/docs/which-eld-providers-are-supported/

Overview

Advanced IFTA supports integrations with multiple ELD providers through available APIs and data export methods. We have the ability to integrate with any ELD provided their API Structure is already in place to allow data integrations.

Common Provider Types

- Commercial ELD platforms
- Fleet management systems
- GPS tracking solutions
- Telematics providers

If Your Provider Is Not Listed

Many systems can still be supported through:

- API integrations
- CSV imports
- Custom data imports

Why It Matters

The more mileage data that can be imported automatically, the less manual work is required each quarter.
